

EMCO Radial

22mm Radial Aluminium Primary Entrance Matting

EMCO Radial is a designer's dream aluminium product, allowing hardwearing radial curves that create a design feature in themselves. Available only in a 22mm gauge this prestigious looking aluminium grid system allows a variety of optional colour and infill choices from cassette brush, ribbed carpet to rubber. EMCO Radial is ideal for curved areas such as revolving doors.

EMCO Radial is best suited to a matwell being created after the matting is provided and specifically to fit the radial of the matting.
